expand()
get (int index)
set (int index, int newVal)
add (int index, int newVal)

why add
expand? We thought
we wouldn't need it...

foo ordered SuperArray

- + add (int x)
- + remove (int index)
- + size ()
- + get (int index)

clarification → this
is SuperArray yes? The one we made?
implement binary search in add () to insert the new value where
it belongs using SA.add (int index, int newVal)

Leopard
Rock

2	3	5	7	9	14	28
7	3	14	2	5	9	28

add (12)

2	3	5	7	9	12	14	28
---	---	---	---	---	----	----	----

would it be
simpler to have sort
separate from add?
